Rishie Raj

8700 Baltimore Ave, College Park, MD 20740
240-854-7123 | rishie.raj27@gmail.com | linkedin.com/in/rishieraj | github.com/rishieraj | rishieraj.github.io

Technical Skills

Languages: Python, C++
Tools: GitHub, GCP, Azure, Docker, ROS, RViz, MATLAB, LaTeX
Frameworks: PyTorch, TensorFlow, CUDA, Keras, scikit-learn, Pandas, Matplotlib, Hugging Face, LangGraph
Concepts: Machine Learning, Deep Learning, Computer Vision, Natural Language Processing, Cloud Computing, Object-Oriented Programming, Software Development

Experience

National Institute of Standards & Technology **Gaithersburg, MD**
Research Associate — AI Testing and Evaluation *Feb 2026 - Present*

- Working on building benchmarks for deepfake detection across different modalities like text, image, and audio.
- Testing detection models for adversarial attack robustness on real and synthetic data.
- Deploying AI models on large-scale GPU-accelerated environments for testing and inference.
- Using statistical analysis methods like AUC ROC, PR, and Brier scores to compare the performance of detection models on various forensic tasks.

UMD Computer Science Dept. **College Park, MD**
Researcher Volunteer — Multimodal Systems *Apr 2025 - Jan 2026*

- Researcher in GAMMA Lab at UMD, working on data collection, dataset modeling, experimental evaluation, and large-scale analysis for audio-visual large language models, multimodal AI systems, and AI agent frameworks.
- Collaborating with Tianyi Lab at UMD to formulate research problems, develop and prototype image editing AI agents, and conduct controlled experiments for agentic decision-making and multimodal reasoning.
- Trained and fine-tuned large multimodal models on GPU clusters, optimizing throughput and memory utilization.

Maruti Suzuki India Ltd. (MSIL) **Gurugram, India**
Product Manager — R&D *Jul 2018 - Apr 2021*

- Worked as project manager on large-scale, cross-functional engineering teams, leading the Ertiga and its variants, India's highest-selling MPV, involving data-driven decision-making and stakeholder communication.
- Contributed to diesel BS-6/EURO-6 powertrain development, MSIL's first self-designed diesel engine, applying engineering experimentation, validation, and performance analysis under regulatory constraints.
- Implemented a cost-optimization initiative ($\sim$2,500 INR/vehicle) through quantitative analysis of materials and manufacturing trade-offs, directly supporting productivity and commercial goals.
- Proposed a process optimization layout for the Weld shop ventilation system using operational data analysis, reducing wastage by $\sim$30% and improving system efficiency.
- Played a key role in eliciting customer and market requirements and translating them into well-defined product specifications, enabling data-informed design decisions aligned with business objectives.
- Led schedule and milestone prioritization across multi-disciplinary design and development teams, ensuring stakeholder alignment, timely execution, and efficient resource utilization.

Publications

1. **FaSTA*: Fast-Slow Toolpath Agent with Subroutine Mining for Efficient Multi-turn Image Editing**
   Advait Gupta, *Rishie Raj*, Dang Nguyen, Tianyi Zhou
   ICLR 2026
2. **Foundations and Frontiers of Multimodal Agentic Frameworks**

Projects

Multi-modal Agent for Reference-Guided Image Editing *Apr 2025*

- Developed an LLM-based AI agent that performs complex, multi-step image edits using indirect multimodal signals, demonstrating hypothesis-driven agent behavior without task-specific training.
- Proposed a two-stage planning and execution framework that improves flexibility by decoupling reference analysis from action execution, aligning with modern AI agent architectures.

Detecting AI-Generated Images in Zero-Shot Setting *Dec 2024*

- Proposed a novel statistical framework by adapting perplexity and cross-perplexity metrics for evaluation of image generative models.
- Achieved robust, training-free detection across multiple generative models (Stable Diffusion, DALL·E, Emu3), demonstrating generalization and reproducibility.

Object Detection in Adverse Weather Conditions *May 2024*

- Designed a deep learning-based CNN defogging model, predicting parameters for differentiable functions via learned representations.
- Integrated the system with YOLOv5 for real-time object detection, improving mAP through systematic experimentation and benchmarking.

Real Time Semantic Segmentation using Efficient Neural Network *May 2024*

- Developed a lightweight CNN encoder-decoder architecture for semantic segmentation that is optimized for real-time inference and deployment constraints.
- Achieved strong segmentation accuracy while maintaining computational efficiency through architectural optimization.

Project NavGuide: A Swarm Navigation Robot System for Warehouse Applications *Dec 2024*

- Designed and implemented a multi-agent robotic swarm system, leveraging the RVO2 obstacle avoidance algorithm to model decentralized agent coordination and collision avoidance.
- Conducted simulation-based experimentation in Gazebo using a five-agent TurtleBot3 swarm, evaluating system behavior in a structured warehouse environment.

Education

University of Maryland, College Park **College Park, MD**
M.Eng. in Robotics; ***GPA: 4.0/4.0*** *Aug 2023 - May 2025*

Odisha University of Technology and Research **Bhubaneswar, India**
B.Tech in Mechanical Engineering; ***GPA: 8.0/10.0*** *Aug 2014 - May 2018*
